We've Got A Challenge For Everyone!

2014-15 DESTINATION IMAGINATION CHALLENGE PREVIEWS

RISING STARS (K-2)
In **Animal Mish Mash**, teams will learn about animal characteristics and habitats — their home and where they live. They will "design" a new animal and their habitat and construct it in 3D. The team will create a play about their new animal and its adaptations to its new environment.

SERVICE LEARNING
In **Brand Aid**, teams will find a community need and create a project to address that need. They will use graphic arts and sound to create a "brand" to help meet the project goal. They will create a live presentation to highlight the project and project evaluation.

IMPROVISATIONAL
In **The Improv Games**, teams will use their acting skills and creativity to create three independent improvisational sketches. They will research and incorporate improv games and street performances.

FINE ARTS
In **Feary Tales**, teams will present a "fairy tale" about a character that faces a "fear!" Teams will also create creative artwork that expresses a feeling and functional artwork that serves a purpose! Finally, they will create an "illusion" or special effect that makes the "impossible" seem possible!

STRUCTURAL
In **Lose To Win**, teams will design and build the lightest structure possible that continues to support the weight of a pressure board when pieces are removed. They will also create a performance that tells a story about how something is "transformed."

SCIENCE
In **Making Waves**, teams will design and create an original, incredible sound machine. They will also create and integrate two visible displays of sound waves into a performance that "speeds up" or "slows down" somewhere along the way!

TECHNICAL:
In **Creature Feature**, teams will build a creature that uses technical methods to perform team-chosen actions. Then, present a story of adventure with the creature as a character. Finally, they will use technical methods to demonstrate features of a world where the story is set.
